B. Fees

Fee should be calculated using the following process & worksheet. **Please see Instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

Notice of Intent
Section A. 6.
General Project Description

The proposed project includes several limited scopes of work. These are:

1. Installation of an exterior deck. This space will serve the current tenant. The deck will be constructed on tubular concrete footings. This approach limits excavation. The construction of the deck will require the removal of one two-trunk tree. Other existing trees will remain. Please see attached plan showing the location and size of the deck.
2. Construction of a fence along the Mill Brook retaining wall to improve site safety. The fence will be of metal construction and up to four feet tall.
3. Repair of an existing wooden enclosure that supports a potable water line (water conveyance). The existing structure spans the Mill Brook. The new enclosure will be constructed of similar materials.

The project is adjacent to the Mill Brook. We anticipate protecting the Brook with stacked straw wattle during excavation activities. The repair/replacement of the water line enclosure will include the use of netting beneath the work area to avoid materials falling into the Brook. The water line may be over 100 years old. As such, the nature of its construction is unknown and the methods necessary for access will be developed during the project.

The proposed project does not have significant impact relative to Section 31 of the Arlington Regulations for Wetlands Protection which addresses Climate Change Resilience. There are no substantive changes in grade, flood water storage or vegetation proposed. As such, there is no adverse impact on climate change resilience anticipated. From a wider perspective the Applicant has made significant efforts to reduce carbon emissions at this property. The building is completely heated and cooled by a geothermal heat pump system. The geothermal system replaced an antiquated fuel oil fired steam system. Additionally, a portion of the building electrical consumption is offset by a solar PV array on the roof of the building.
