

Hi,

Larry Krupp here, listened in on last night's discussion re posting website content. Strongly suggest you consider a sort-able table or more than one. E.g., each document or public comment is a separate row, with columns such as Title, Date, Submitter, Type, Whether Controlling, and Full Text (or link to it). This gives different people the ability to see the data their own way; e.g., someone might want to see just what's new in the last week - so they can click and sort by date. Others might want to see all items of a particular type (e.g., Public Comments) so they click that column. Etc.

I work with this kind of stuff a lot, and listening to your conversation last night this immediately came to mind.

Done the right way it can be easy to manage/update and provide the public with a lot more of what they want.

My 2 cents,

- Larry
